

## Robot Scanners

### **K-Robot**

K-Robot upgrades any industrial robot or actuator into a flexible, productive and accurate metrology solution. The K-robot metrology chain features proven Metris metrology components. K-Robot is perfectly suited for applications that require productivity and flexibility while offering metrology accuracy.

## Large Volume Metrology

### **Laser Radar**

The Metris Laser Radar is the only solution available that provides automated, non-contact measurement capability for large-volume applications of up to 60 meter radius. The new generation of metrology instruments precisely measures large-scale geometry without requiring photogrammetry dots, laser tracker spherically mounted retro-reflectors, retro-reflectors or probes. The Metris Laser Radar is the only solution available that provides automated, non-contact measurement capability for large-volume applications of up to 60 meter radius. The new generation of metrology instruments precisely measures large-scale geometry without requiring photogrammetry dots, laser tracker spherically mounted retro-flectors, retro-reflectors or probes.
