

X-Ray and CT Inspection

X-Ray Electronics Inspection- XT V 160

The XT V 160, also known as the Revolution, has been developed utilizing X-Tek's **20 years experience** in nanofocus X-ray technology.

The system provides the highest resolution and magnification possible within a compact system and is ideally suited for inspection of electronic components in production lines and failure analysis laboratories.

The XT V 160 is a **versatile** tool that allows an operator to easily make use of the system's manual and programmable inspection capabilities. On top of it is ready for **CT inspection** to reconstruct the test sample in full 3D image.

Designed for 100% BGA and μ BGA inspection, multilayer board inspection and PCB solder joint inspection, it is a **simple to use, high resolution and cost-effective** inspection solution that is an indispensable workhorse for any inspection lab.

XT H 225 X-Ray and CT Inspection System

The XT H 225 is a real-time X-ray inspection system having both fully programmable and manual operation and is designed to deliver high quality results in a quick, straightforward process.

CT scanning is only a matter of using dedicated CT software. With its powerful 225kV source, high resolutions and measurement volume of ϕ 250mm, and 600mm height it is suited for a wide range of applications ranging from small plastics to large casting components.
